BRICS

Complete Brick Chimney ERP & Accounting Software

Complete Business Management + Operations + Accounting System

Software Concept & Functional Specification – V1

BRICS is proposed as a complete ERP and accounting platform for brick kiln/chimney businesses. It manages the complete cycle from raw materials, labour and production to stock, sales, dispatch, payments, accounting, costing and profitability.

1. Company & Administration

- Company/firm profile
- multiple kilns/chimneys
- multiple branches/sites
- financial years
- GST/PAN details
- bank accounts
- users
- roles and permissions
- audit log
- backup and restore.

2. Party Management

- Customers
- suppliers
- labour contractors/Sardars
- transporters
- employees
- other parties
- complete ledger
- outstanding balances
- transaction history.

3. Brick Production Management

- Soil → Brick Making → Drying → Firing → Sorting → Finished Stock. Track production date, kiln/chimney, chamber, brick type, quantity, labour group, fuel consumed, green bricks, fired bricks, broken/rejected bricks and good bricks.

4. Labour Management

- Labour master

- labour groups
- Sardar/contractor
- workers
- attendance
- advances
- wage/rate
- brick production
- loading/unloading
- payments
- deductions
- settlements
- labour ledger and outstanding.

5. Inventory & Stock

- Finished brick stock
- raw materials such as soil, coal, sand and fuel
- consumables
- machinery/electrical/repair items
- stock movements
- adjustments
- automatic updates from purchase, production, sales and wastage.

6. Vehicle & Transport

- Own/hired vehicles
- truck/tractor/tipper
- drivers
- trips
- diesel
- maintenance
- loading/unloading
- customer delivery
- transport income/expense
- vehicle-wise profitability.

7. Purchase Management

- Purchase Order → Purchase → Stock → Supplier Bill → Payment. Manage coal, soil, diesel, machinery, spare parts, electrical items and other materials.

8. Sales Management

- Quotation → Sales Order → Invoice → Dispatch → Payment → Customer Ledger. Manage customer, brick type, quantity, rate per 1,000, discount, loading, transport, GST, invoice, delivery challan, payment and outstanding.

9. Dispatch & Delivery

- Customer, invoice, vehicle, driver, brick quantity/type, loading and delivery location, dispatch date/time, delivery status and acknowledgement. Confirmed dispatch reduces stock automatically.

10. Complete Accounting

- Chart of Accounts
- ledger groups
- cash
- bank
- customer/supplier/labour/expense/income ledgers
- receipt, payment, contra, journal, sales and purchase vouchers
- debit/credit notes
- Day Book
- Cash Book
- Bank Book
- Ledger
- Trial Balance
- P&L;
- Balance Sheet
- Cash Flow
- Receivables and Payables.

11. GST & Tax

- GST-ready invoices
- CGST
- SGST
- IGST
- HSN/SAC
- taxable amount
- GST reports
- credit/debit notes
- GST-ready sales and purchase reports.

12. Expense Management

- Labour, coal, diesel, electricity, vehicle, machinery, repairs, salary, food, rent, office, government charges, bank charges and miscellaneous expenses. Payment methods: Cash, Bank, UPI or Credit.

13. Cash & Bank Management

- Opening/closing cash
- cash receipts/payments
- bank deposits, withdrawals and transfers
- cheques
- UPI

- bank charges
- bank reconciliation.

14. Management Dashboard

- Production, sales, stock, receivables, payables, labour payable, expenses, estimated profit, monthly graphs, collection, fuel consumption and key business KPIs.

15. Cost & Profitability

- Actual production cost
- cost per 1,000 bricks
- labour, coal, soil, electricity, loading, repair and other costs
- selling price
- gross margin
- comparisons by kiln, month and brick type.

16. User Roles

- Super Admin, Owner, Accountant, Manager, Production Manager, Supervisor, Sales Executive, Store Keeper and Driver with granular permissions.

17. Mobile Application

- Mobile-friendly supervisor interface for production, attendance, stock/dispatch and delivery updates. Simple operational forms synchronized with the main ERP.

18. Complete BRICS Business Workflow

Stage	Main Activities
Production	Raw material → Brick making → Drying → Firing → Sorting → Finished stock
Labour	Attendance → Production → Wage calculation → Advance → Payment → Settlement
Purchase	Purchase Order → Purchase → Stock → Supplier Bill → Payment
Sales	Quotation → Order → Invoice → Dispatch → Payment → Customer Ledger
Inventory	Opening Stock + Production + Purchase – Sales – Wastage = Closing Stock
Transport	Vehicle → Trip → Diesel → Delivery → Transport cost/income
Accounting	Transactions → Vouchers → Ledgers → Trial Balance → P&L → Balance Sheet
Management	Dashboard → KPIs → Reports → Costing → Profitability

19. Suggested Database Structure

Module	Core Tables
Company	companies, branches, kilns, financial_years, users
Masters	customers, suppliers, labour, labour_groups, brick_types, items, vehicles, drivers
Production	production_batches, production_entries, labour_production, production_wastage
Inventory	stock, stock_movements, warehouses, stock_adjustments
Sales	quotations, sales_orders, sales, sale_items, dispatches, delivery_challans
Purchase	purchase_orders, purchases, purchase_items
Labour	attendance, advances, wage_entries, settlements
Transport	trips, fuel, maintenance
Accounting	chart_of_accounts, vouchers, ledger_entries, receipts, payments, journal_entries, bank_transactions
Reporting	daily_reports, production_reports, sales_reports, stock_reports, labour_reports, financial_reports

20. Recommended Development Approach

- Build BRICS as an operations-first ERP with accounting integrated into every financial transaction.
- Operational transactions should create the relevant stock and accounting effects automatically wherever applicable.
- Use role-based permissions and an audit trail.
- Keep supervisor/mobile screens simple while retaining full accounting controls for authorized users.
- Design the database and accounting engine first, then build modules and reports on top.

21. Key Management Questions

- How many bricks were produced today/month/year?
- How many bricks are in stock?
- How many bricks were sold and dispatched?
- How much do customers owe us?
- How much is payable to suppliers and labour?
- How much coal/diesel was consumed?
- What is the actual cost per 1,000 bricks?
- What is gross margin and net profit?
- Which kiln, brick type or customer is most profitable?

• Where are stock, cash and operational leakages occurring?

22. Example Cost per 1,000 Bricks

Cost Component	■ / 1,000 bricks
Labour	1,200
Coal	1,700
Soil	500
Electricity	150
Loading	250
Repairs	150
Other	150
Total Cost	**4,100**
Example Selling Price	**6,500**
Example Gross Margin	**2,400**

Conclusion

BRICS should act as the single source of truth for the brick chimney business: data entered at the kiln flows into inventory, sales, payments and accounting, while management reports provide clear visibility into cost, cash flow and profitability.
